"Helping machines understand the world better."

Summary_

A computer vision researcher with diverse experience including stereo-depth estimation, object detection, and AutoML techniques. Interested in building scalable and robust vision models and always open to exploring new challenging problems. Enjoys writing (and reading) clean code.

Experience_

Torc Robotics Remote, Germany

SENIOR MACHINE LEARNING ENGINEER

June 2023 - Present

- Designed and developed a real-time monocular 3D object detector, with long-range detection capabilities and robustness across camera views. Demonstrated significant improvement in runtime-accuracy trade-offs. Handled model conversion to TensorRT for deployment on embedded hardware. Regularly helped team members in performance debugging, model design, and improving team processes.
- Developed performance metrics based on system requirements and created pipelines for consistent performance reporting of trained and deployment models. Created model analysis notebooks to understand performance gaps better.
- Collaborated in research project for using stable video diffusion with ControlNet to generate training data for object detection.

Algolux Remote, Germany

COMPUTER VISION RESEARCHER

Oct 2022 - May 2023

- Developed a prototype for class-agnostic object detector with detection capability over 300m range (even with small objects).
- Designed custom training objectives that reduced false positive rates by 20 %.
- · Leveraged data augmentation techniques and developed training schedules with synthetic data to improve performance on rare objects.

Vision Lab, University of Freiburg

Freiburg, Germany

COMPUTER VISION RESEARCHER

Sept 2017 - October 2022

- · Developed a multi-task model to predict optical flow, depth, occlusion, motion boundaries, and scene flow. The model was a runner-up entry in robust vision challenge, CVPR, 2018.
- · Developed a method to perform neural architecture search on UNet-based stereo depth models. Resultant models were more efficient compared to manual baselines.
- · Developed model regularization techniques that improve the robustness of recognition models under the influence of different image corruptions. Also, studied the influence of model compression techniques on robustness.
- Supervised student research projects that lead to conference papers.

Google Grenoble, France

RESEARCH INTERN

Sept 2019 - Nov 2019

- · Studied the impact of hyperparameter optimization of few-shot object classification. The study showed large improvements in few-shot performance (up to 9 % in some cases).
- Integrated BOHB (a hyperparameter optimization method) into Google's compute cluster.

Evvnt Pune, India

• Wrote web-service integrations for automated event publishing.

October 2013 - Sept 2014

• Resolved around 35 bugs in four weeks to improve the application's efficiency.

PromptCloud Bangalore, India

SOFTWARE ENGINEER

SOFTWARE ENGINEER

October 2012 - Sept 2013

• Developed custom web-crawler plugins for various vertical search applications.

• Helped set up an ElasticSearch cluster and a keyword search API.

Skills_

Computer Vision Object detection, Stereo Depth estimation, Optical flow estimation

Machine Learning Few-shot learning, Neural Architecture Search, Model pruning, Hyperparameter Optimization

Libraries & Frameworks PyTorch, TensorFlow, mmdetection, detectron2, Numpy

Programming Python, C++, cuda, HTML, ruby, LaTeX Tools AWS, Sagemaker, Docker, Slurm, Git

Towards understand	ling adversarial robustness of optical flow networks	CVPR 2022
S. Schrodi, T. Saikia , and	T. Brox	
Improving robustne	ss against common corruptions with frequency biased models	ICCV 202.
T. Saikia , C. Schmid, and T	Brox	
Towards improving	robustness of compressed CNNs	ICMLW 202.
J. Hoffmann, S. Agnihotr	, T. Saikia , and T. Brox	
Multi-headed neura	ensemble search	ICMLW 202.
